VENICE OFFSHORE PORT
innovating to compete globally

SINCERITIES
The offshore port is a vital part of aviation and logistics, offering a strategic location for major shipping routes. It is accessible by a network of high-speed rail and road connections, including the A17 motorway, which connects the port to the mainland. The port is served by major airlines, including Ryanair and Lufthansa, providing direct flights to major European cities. The port is also connected to the Port of Venice, which serves as a gateway to the EU.

A FORWARD-LOOKING STRATEGIC PROJECT

The Venice Offshore terminal is a prominent node in a network of strategic locations that includes the Port of Venice and the Venice Marco Polo Airport. This project aims to connect the port to the Global European Transport Network (GETN) and to the EU’s transport infrastructure. The project involves the construction of a new ferry terminal, a new cruise terminal, and the expansion of the port’s handling capacity. The terminal will be equipped with the latest technology to handle cargo ships, including roll-on/roll-off vessels, and will be integrated into the existing port facilities. The project is expected to create new jobs and stimulate economic growth in the region.

The project is co-financed by the European Union through the Trans-European Transport Networks (TEN-T) initiative, which aims to improve the efficiency and sustainability of Europe’s transport networks. The project is expected to be completed by 2025.
